

Who's Watching You?

Complete Solutions, Managed Security Monitoring

Counterpane provides trusted and objective Managed Security Monitoring for the network infrastructure NEC BNS builds and maintains for your Complete Security Solution.

Protect Your Business From Network Predators

Network Security is a process—not a software application, a device, or a person. Security vulnerabilities can occur at many different levels within the network, and reducing this ever-present risk requires both a hardened architecture and continuous vigilance.

To provide more complete solutions, NEC Business Network Solutions and Counterpane Internet Security, Inc combine the best respective services for your network security and data protection. NEC BNS provides network security vulnerability assessment, equipment procurement, configuration and installation plus maintenance, while Counterpane provides the expert network monitoring service.

Managed Security Monitoring

Counterpane offers around the clock, scalable Managed Security Monitoring (MSM) of all network devices, effectively monitoring the entire network's security. Expert security analysts provide real-time detection and response against both internal and external threats, at geographically redundant Secure Operations Centers. All of these services are custom tailored to meet customer-specific needs in a rapidly changing threat environment.

Managed Security Monitoring is available as a stand-alone service. In addition NEC BNS' Security Vulnerability Assessment has been bundled with the monitoring to meet the needs of different customers based on their size and sensitivity to security threats. With MSM, you get:

- Real-time, around-the-clock monitoring of all network devices, including firewalls and IDS's, from redundant Secure Operations Centers
- Immediate detection and response to attacks
- Coaching on attacks, both internal and external
- Weekly reports detailing security events and trends

Counterpane is the world leader in Managed Security Monitoring (MSM). Expert monitoring provides security in a world where the threats and attacks change every day. And expert monitoring helps you manage the risks of being on-line. Counterpane Internet Security provides you with the experts you need to do business on the Internet safely.

NEC BNS delivers a seamless integration of products and services with a single point of contact, assuming responsibility for all aspects of the security solution. Leveraging strategic partners with leading solution providers such as Counterpane, Cisco and F-Secure, NEC BNS engages customers from start to finish in a structured framework for success.

MSM is your best possible defense in this rapidly changing environment where threats can be both internal and external. The service is vigilant and adaptive with regular coaching and counseling on how best to protect your business from attacks. And best of all, you can have expert security immediately at a price you can afford.

Network Security Vulnerability Assessment

The NEC BNS Security Vulnerability Assessment addresses a wide scope of issues in the customer environment. Based on the customer's needs, the assessment applies multiple discovery tools to detect external threats and examines the internal security policies, procedures, and premise concerns. The assessment delivers the analysis of the audit with recommendations and budgetary cost estimates for mediating any threats discovered.

NEC BNS. The relationship between technology and you™

NEC BNS helps you maximize the investment and longevity of current technology while implementing scalable security solutions to meet customer-specific security needs.
